

FUME FILTER

Dust & Fume Solutions Pty Ltd

FUNCTION:

- MX Dust Fume Filters are designed to efficiently capture and filter dust and fumes in various industrial settings.
- The three-stage filtration system ensures effective removal of airborne contaminants, providing clean and safe air in the working environment.
- The filters are engineered to evenly distribute airflow, maximizing filtration efficiency.

MATERIAL:

- Quality steel construction made in Australia

FILTRATION:

- 3-stage flow-through filters for efficient cleaning

FILTER CHAMBERS:

- Engineered for even distribution of airflow across filters

DIMENSIONS:

- 1230 x 1340 x 1400 (H)

MAX AIRFLOW:

- 8,000 m³/hour using 4 kW fan

INLETS:

- 2 x 200mm inlets for multiple inputs

FEATURES:

- Three levels of filtration for exceptional results:
- Pre-filter to capture airborne dust particles
- HEPA filter for superior filtration
- Carbon filters for odor elimination
- High-performance design for efficient air cleaning
- Versatile customization to suit specific customer applications
- Suitable for addressing location issues and specific dust or fume requirements
- Compatible with our Fume arms for localized fume capture

BENEFITS:

- Efficient filtration of dust and fumes for a cleaner and healthier work environment
- High-performance fan for maximum airflow and effective extraction
- Multiple inlets allow for flexible installation and integration with different equipment
- Customizable design to meet specific application requirements
- Made from quality steel for durability and long-lasting performance
- Designed to comply with industry standards and regulations
- Can be used in conjunction with Fume arms for localized fume capture
