

GALVANISED LOBSTER BACK BENDS

Dust & Fume Solutions Pty Ltd

FUNCTION:

- Galvanised Lobster Back Bends are essential components in ducting systems. They provide a smooth and efficient airflow path, reducing pressure loss and maintaining optimal airflow performance.
- With their sturdy construction, these bends can withstand the pressure within ducting systems, ensuring reliable and efficient operation.

SIZES:

- 325mm, 375mm, 450mm - 800mm

ANGLES:

- 90°, 60°, 45°, 30°, 15°, 7.5°

MATERIAL:

- Galvanized steel

FEATURES:

- Constructed from high-quality galvanised steel for durability and corrosion resistance
- Robust construction capable of withstanding pressure in ducting systems
- Designed with lobster back shape for smooth airflow and reduced pressure loss
- Available in multiple angles to accommodate various ducting configurations
- Suitable for industrial applications requiring efficient airflow redirection

BENEFITS:

- Robust and durable construction ensures longevity and reliability in demanding industrial environments
 - High-quality galvanised steel offers corrosion resistance for extended product life
 - Smooth lobster back design minimizes turbulence and pressure drop, optimizing airflow efficiency
 - Various angle options provide flexibility in ducting system design and layout
 - Facilitates efficient redirection of airflow, enhancing overall system performance
