

Y PIECES

Dust & Fume Solutions Pty Ltd

FUNCTION:

- Y Pieces serve as critical components in modular ducting systems, allowing the extraction of fumes, dust, and other airborne matter without the risk of air or product leakage.
- Y pieces give equal priority to joining 2 ducts of equal size.

SIZES:

- Standard equal sizes are available ex stock e.g. 80-80-80 or 250-250-250.

ANGLES:

- 30°, 45°

MATERIAL:

- Galvanised Swedish steel 0.9 thickness

FEATURES:

- Enables effective extraction of fumes, dust, and suspended airborne particles
- Ensures a tight seal to prevent air leakage and maintain optimal airflow
- Made from high-quality materials for long-lasting performance
- Designed for easy and convenient installation within modular ducting systems
- Suitable for a wide range of manufacturing industries requiring extraction capabilities

BENEFITS:

- Efficient extraction of fumes and dust improves the overall air quality in the manufacturing environment, promoting a healthier and safer workspace for employees.
- Helps meet regulatory standards and guidelines for air quality and workplace safety.
- Minimizes the presence of harmful airborne particles, reducing potential health risks and enhancing worker productivity.
- Allows for flexible and customizable configurations, adapting to specific layout and extraction requirements.
- Ensures efficient extraction, reducing the accumulation of dust and prolonging the lifespan of downstream equipment.
- Prevents the release of hazardous substances into the immediate atmosphere, maintaining a safe and clean working environment.
