

DUCT ENTRIES SERVE AS CONNECTION POINTS THAT ALLOW A NEW RUN OF MODULAR DUCTING TO BRANCH OFF FROM AN EXISTING SYSTEM.

THEY FACILITATE THE EXPANSION OR MODIFICATION OF DUCTING NETWORKS WHILE ENSURING PROPER AIRFLOW AND MINIMAL PRESSURE LOSS.

SPECIFICATIONS:

Material: Galvanized steel.

Size: Various sizes to match the main duct and branch diameter requirements

Angles: Available in 30°, 45° and 90°

FEATURES:

- High-quality galvanized steel construction
- Designed for easy integration with existing modular ducting systems
- Secure and leak-proof connections
- Enables branching off the main duct at different angles
- Provides flexibility in expanding or modifying ducting systems

BENEFITS:

- Simplifies the process of adding new runs to existing ducting systems
- Enables efficient distribution of air, fumes, or dust within the facility
- Ensures a secure and leak-proof connection, minimizing air leakage and pressure loss
- Compatible with various diameters, providing versatility in system design and layout
- Durable construction ensures long-lasting performance and reliability
